A Gibbs measure for a potential  $U \in L^1(X)$  is a probability measure  $\nu$  such that for any set  $A \subset X$  with  $m(A) > 0$  there is a constant  $C \geq 0$  and a sequence of continuous functions  $f_n$  with  $\text{supp}(f_n) \subset A$  and  $|f_n| \leq e^{\beta U}$  such that  $\nu(A) = \lim_{n \rightarrow \infty} \int_A f_n d\mu$  for all  $\beta > 0$ . Now I am having problems with proving the following claim: Let  $(X, \mathcal{B}, \mu)$  be a measure space and  $U \in L^1(X)$  such that  $\int U$  is bounded below. Then there is a Gibbs measure  $\nu$  for  $U$ . What I already know is that the formula is valid if we take  $A$  with  $m(A) > 0$ . But what about  $m(A) = 0$ ? Is there a simpler proof? A: Let  $\Omega$  be the open ball centered at 0 with radius  $\delta = \frac{1}{\inf_{x \in X} U(x)}$ . Now apply the formula to the set  $A = \Omega \setminus E$ , where  $E$  is any null set such that  $A \subset \Omega$ . Q: Deleting folders and sub-folders with unknown structure I have a folder containing a lot of folders. They all start with the same structure: 3A519Z3 each folder has a number from 1 to 5, a final 4 letter (and 1 additional letter). I want to delete them all, without actually knowing how many folders there are. What is the most efficient

The images show the world-class beaches and the central business district of Gosford strewn with the detritus of passengers and drivers stranded overnight by severe snow and ice. Do you know how long it takes to clean up this? They don't care if they're stranded on a bus. They don't care about their passengers," Mr Crawford wrote in a Facebook post about the pictures. "How long before the passengers start walking? How long before someone gets hurt? I wish I was there." A bus with snow in Gosford, NSW, in a photo shared by Stephen Crawford on Instagram.
