The button to create an original image from a base file or let it load into the original size is now under the Crop, Rotate, and Straighten tool, instead of being a separate button below the zoom tool. This is a welcome change, and one that will simplify the workflow for more people. There are three options to choose from to make your files ready for upload. The more choices you give to the Camera Raw Converter, the less photo noise the conversion gives your images. Since this tool is still in beta, details are few and far between. When I tried it out, I was unable to see what was happening, aside from that the files automatically converted nonetheless. So it remains to be seen whether you will really get stellar results out of it. For me, there is no harm in playing around with the preview aspect of the tool anyway. The first, and I can't stress this enough: enable and work with a 200GB hard drive. I believe every serious photographer should have at least 300GB of available space. Photoshop takes a bit of that space up by default (around 15-20GB most of the time, I would say). If your space is full or you only have a 60GB drive, you won't be able to experiment as much as you would want. Perhaps fortunately, we have a few solutions here. Lightroom uses the same approach as Photoshop does. The downside is that the Free license will not see

you beyond any possible future releases. Like Photoshop, Lightroom's raw file support is limited to 16-bit color only. This is not a problem for most, given the steady increase that has been seen in the amount of photographic output that is being sold in color. If you want a lot of exporting options in a tool that is already free, Lightroom works perfect. On the whole, Lightroom works better than Photoshop. In some ways, I find Lightroom to be a more comfortable tool to work with, if only because of the ease of use. I must, however, stress that Lightroom needs a few features that Photoshop has, such as smart library management. Installing your flickr images to one location in a Flashcard or a smart folder is an example of this feature. As a photographer working with lots of images, this is a must. Also, Adobe Lightroom should somehow keep a running log on image changes to give you a better view of that thought in the long run. Photoshop works with libraries, but I don't think Lightroom does.
